## Technological Offers type

Software

### Where?

Agricultural Environmental Risk Management Research and Study Centre (CEIGRAM). Joint UPM-ENESA-AGROSEGURO Centre Agricultural Systems Group (AgSystems)

### Software description

Agroclima-Converter v1.0 is designed to convert the format of climate files used by some farming models. This means that we can have the climate file, with the correct structure, data order and units, along with other further parameters, such as the name of the files, starting from a pre-existing climate file in one of the models supported by the converter.
