Technological Offers type

Software

Research and innovation areas

- Agricultura, silvicultura, recursos naturales, usos de la tierra y crecimiento azul

Where?

Sustainable Forest Ecology and Management

Software description

The software carries out a study on the use of water resources in a tranche of a basin. The aim is to create reports that include a set of indicators of hydrological alteration (IAH), using data supplied by a user, which will show us the assessment of the water status and the environmental diagnostics on the tranche of the basin being studies.
